

{ Python Programming }

Day 1

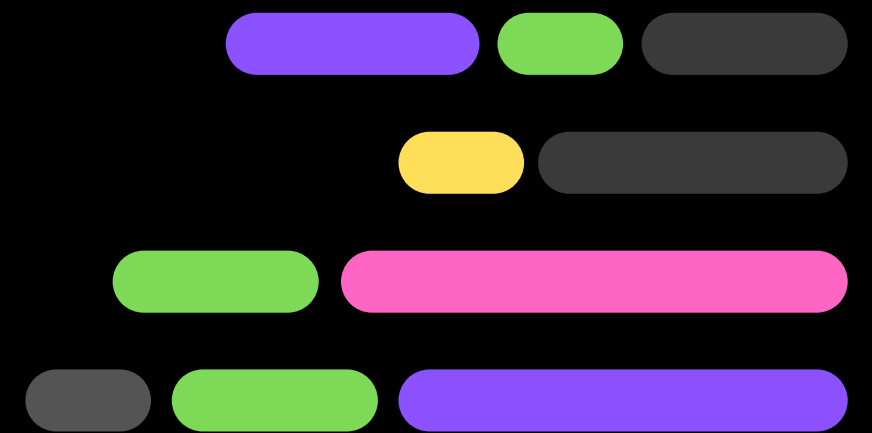

How Do Computers Read Instructions?

Programming Languages

Python - What is it?

- Easiest language to learn
- Prioritizes readability
- Hundreds of libraries to use

Why Python is the GOAT

Python

C++

Printing

```
print("Hello World!")
```

```
#include <iostream>
```

```
int main() {
```

```
    // Printing a simple text
```

```
    string
```

```
        std::cout << "Hello, World!";
```

```
        return 0;
```

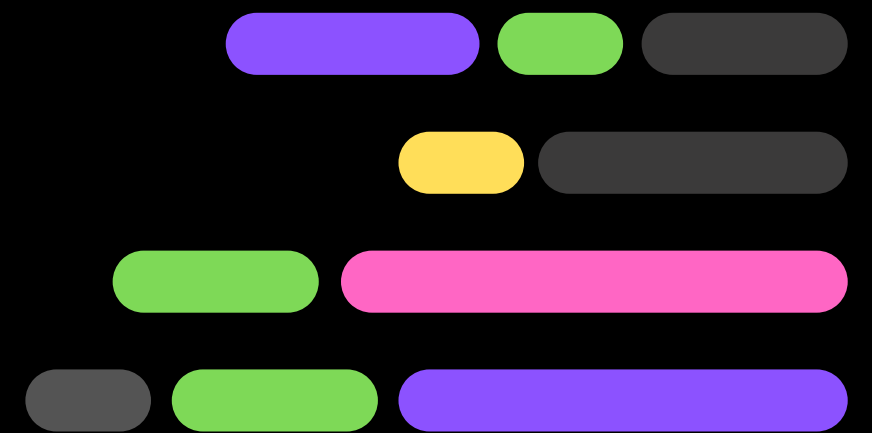

```
}
```

Programming Concepts

LOOPS

Running the same code
again and again

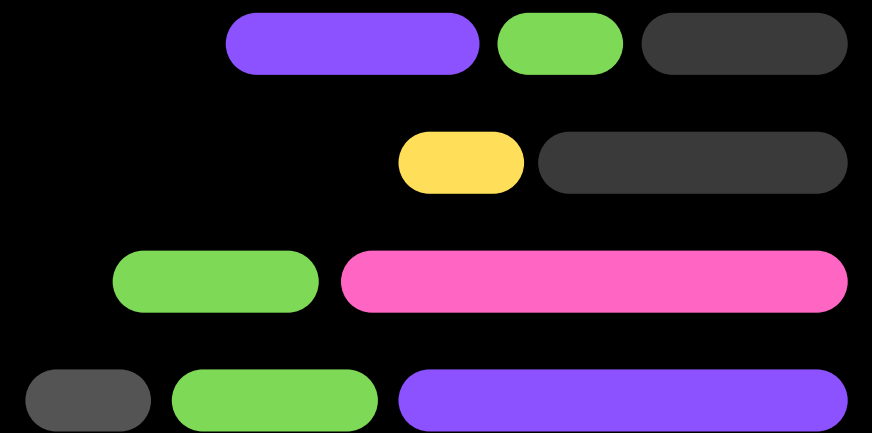

Programming Concepts

IF STATEMENTS

Running code only if
something is true

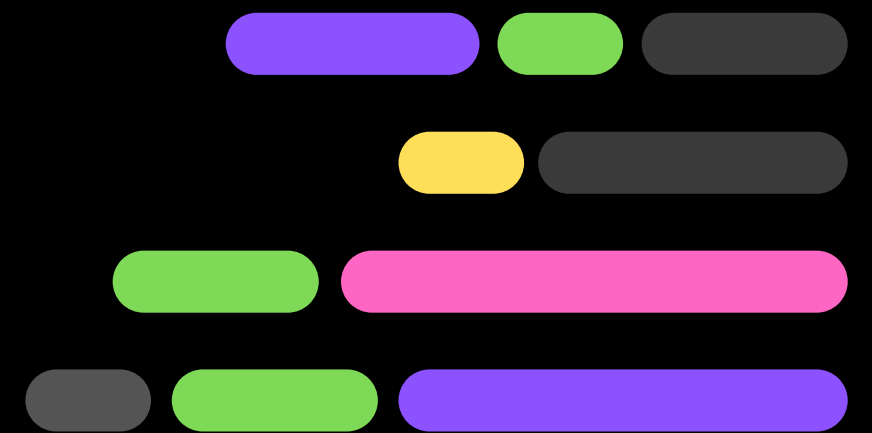

Programming Concepts

VARIABLES

Stores numbers &
text

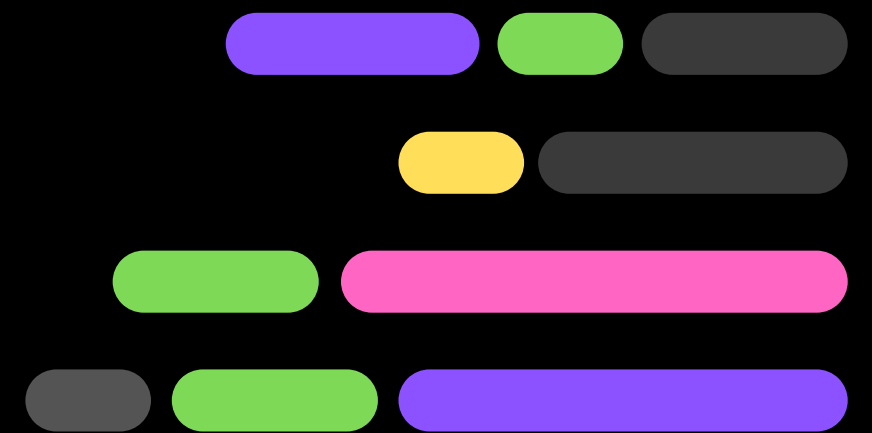

Programming Concepts

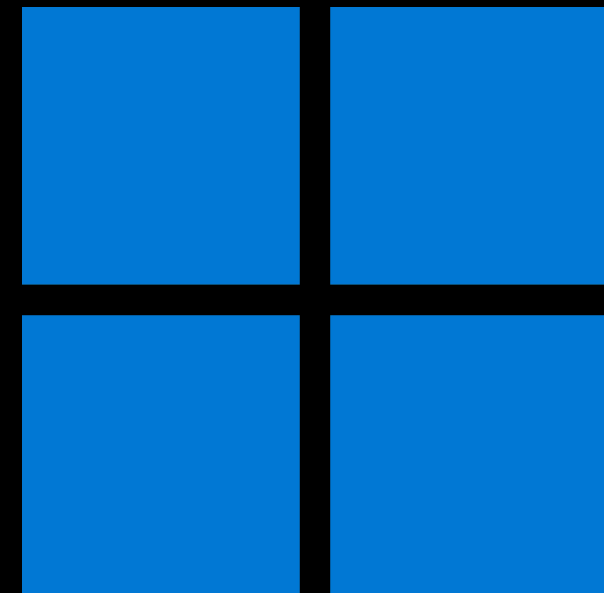

FUNCTIONS

Code that you want
to reuse

Setting up on your computer

Practicing Concepts

VARIABLES

Defining

```
age = 10
```

```
fruit = "banana"
```

Practicing Concepts

VARIABLES

Using

```
if age > 13:  
    print("I like" + fruit)
```

Practicing Concepts

LOOPS

```
for i in range(10):  
    print("Hello")  
    print(i)
```

Practicing Concepts

IF STATEMENTS

```
if time == 0700:  
    print("Wake Up!")
```

Practicing Concepts

`==`

Equal to

`!=`

Not equal to

`>`

Greater than

`<`

Less than

Practicing Concepts

FUNCTIONS

```
def Cat():  
    print("/\_\_/\")  
    print("( o.o )")  
    print("> ^ <")
```

Practicing Concepts

OPERATORS

`+=`

Add

`score += 1`

`-=`

Subtract

`*=`

Multiply

`count *= 5`

`/=`

Divide

Questions?

Ask anything!
